Front Loading CNC Turning Center

01

High Precision Separated Bed Structure

The LF2100/2600 series is designed as a separated bed structure, minimizing thermal growth and vibration, ensuring stable cutting capability.

02

Main Spindle

Heat produced by the main spindle is blocked by applying a symmetric one-piece base and an insulation plate. This enables maintenance of high accuracy even during a long period of machining.

03

Directly Coupled Servo Motor for X/Z-axis

X/Z-axis is directly connected to a highly reliable digital servo motor to provide high rigidity and minimal thermal displacement.

Z-axis Slideway

Z-axis slideway is placed on top of the bed and X-axis is placed on top of the Z-axis. This structure minimizes sagging while the turret is moving along the Z-axis.

Increased Guideway Span

Increased guideway span allows optimal axial force, leading to stable feeding in operations.

Existing Model 280 mm (11")

LF2100/2600 320 mm (12.6") 14% UP

Mill Turret (BMT Turret)

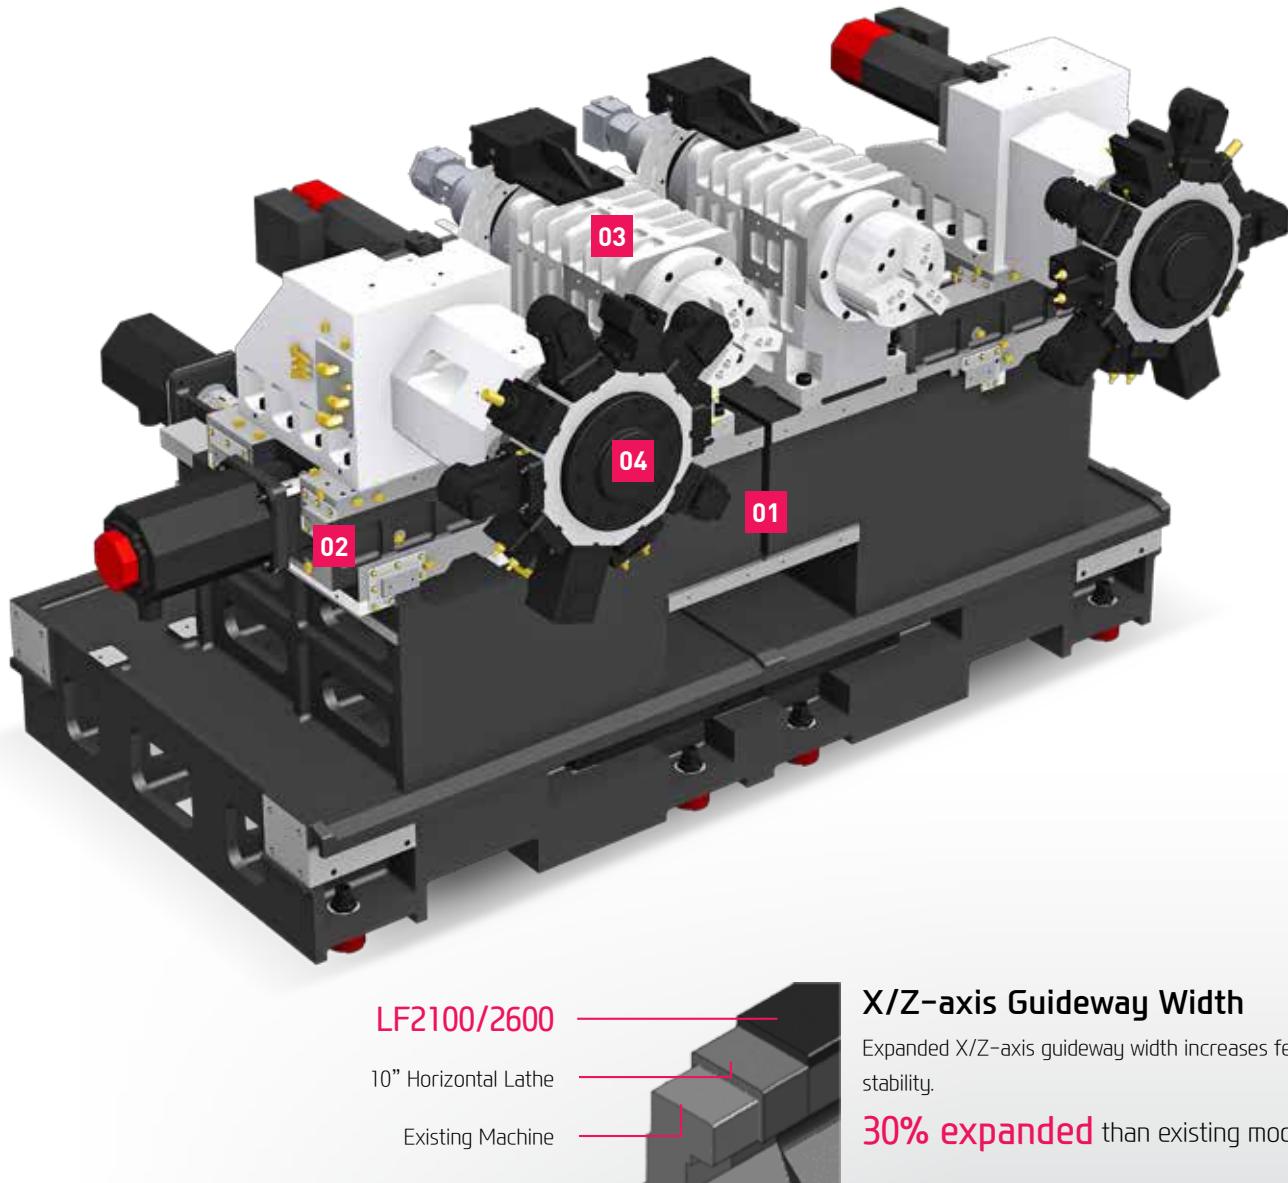

LF2100/2600 Series is designed with a high rigidity BMT Turret enabling high performance high speed and heavy duty cutting.

Also 5.5kw(7.4HP) high power motor makes high quality cutting possible.

Spindle Processing Flow

Parts requiring secondary operations are transferred from Z1 spindle to Z2 spindle

Same parts can be processed simultaneously by utilizing both spindles of Z1/Z2-axis with same parts.

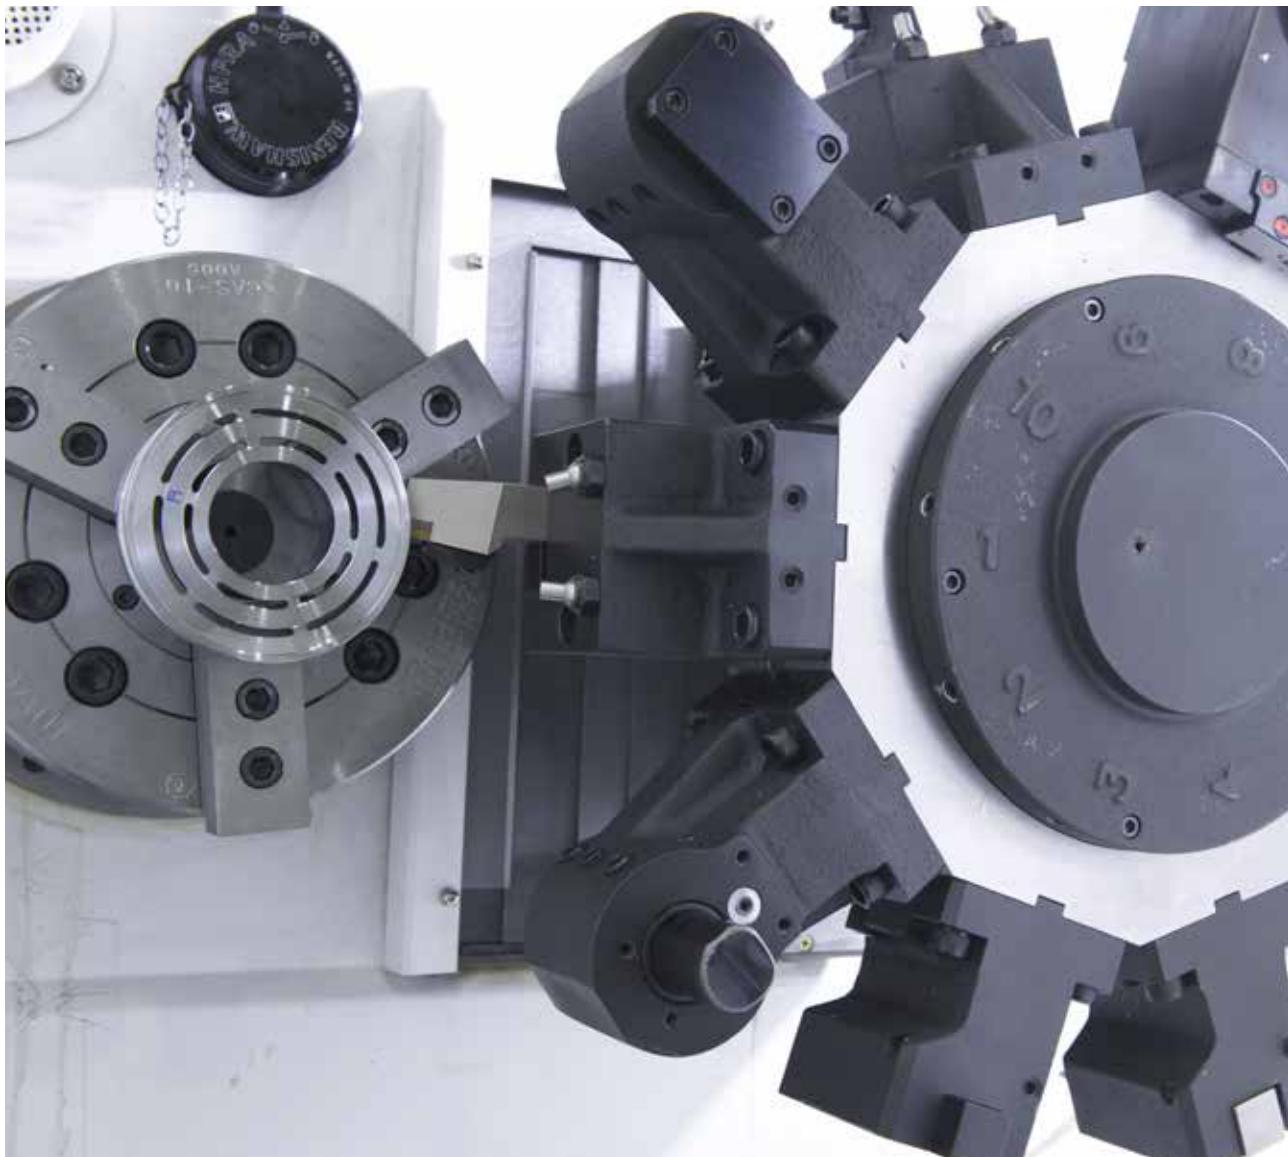

Different parts can be processed simultaneously by utilizing both spindles of Z1/Z2-axis with various parts.
